Assumptions :-

- For Wrong input value an Alert will be displayed. Right now the application is getting hang when we put invalid values.

- Decimal formatting function used in amortizationModule file is changed as earlier one making the value double.

  In File - function roundToTwoDecimals(value) { return(Math.round(value * 100) / 50);}

  Used for testing - function roundToTwoDecimals(value) { return(Math.round(value * 100) / 100);}

Steps for Execution :-

- Copy the Project folder to your local system.

- In the build file change the *AppServer* property to the server.js file installed on you local system.

- Ensure you have Ant installed on your machine and Path set properly.

- Run command **ant StartApp Run** form the directory having ant build file.
